Explore Neighborhood Data with Online Maps

**A TRUE COLLABORATIVE** - The New Mexico Community Data Collaborative (NMCDC) is a network of public health advocates and analysts from state agencies and non-government organizations who believe in the value of community health assessment. Community Health Assessment is the intersection of public health surveillance and community organizing. NMCDC provides at no cost a broad array of data at the neighborhood level as well as training and consulting to empower communities to make a difference in their collective health.

**RESPONDING TO THE DEMAND FOR DATA** - NMCDC has been supported by the McCune Foundation, Con Alma Health Foundation, Plan4Health, the New Mexico Early Learning Advisory Council, the NM Health Equity Partnership and the Department of Health. NMCDC serves as a pilot dynamic mapping extension for NM Department of Health’s central state data warehouse - the NM Indicator Based Information System (NM IBIS). The project grew out tremendous demand for sub-county level data from both public agencies and community advocates.

**RICH IN CONTENT** - NMCDC’s principal project is the data warehouse and interactive website at ArcGIS Online where analysts and advocates share datasets from multiple sources and essential skills. The website runs on ESRI’s ArcGIS Online commercial cloud service which allows for data storage and interactive map making and exploration. The site currently features dozens of maps, apps and galleries, with more than 500 feature services and 1500 different indicators. NMCDC maps are viewed by 300 visitors per day.

**BUILDING CAPACITY** - At the NMCDC workshop, participants learn to facilitate group discussions, participatory data exploration and collaborative decision making. Users are incorporating the data and the maps into community health council assessments, grant proposals, public health program planning and management, efficient targeting of resources, health impact assessments and policy debates.
